

ADR 2/01 Side-Door Latch and Hinge Similarity Supplement

2017 Dodge Challenger variants versus 2017 Dodge Charger variants

2026-07-31

FUNCTIONAL-ARCHITECTURE PASS under broad variant/trim criterion; exact core latch/hinge part-number equivalence not established

Executive determination

- **PASS** — functional similarity: all 12 screened Challenger/Charger variant-pair combinations contain corresponding left/right front-door latch architecture; lower left/right hinge pairs were identified from genuine-Mopar parts retailer fitment listings.
- **VERIFIED**: 613 front-door catalog rows, 52 direct latch/attaching-hardware rows, 21 exploded-diagram records and zero scraper errors.
- **VERIFIED**: 26 exact shared exterior-handle part numbers show ancillary door-control commonality only; they do not support latch/hinge identity or performance.
- **LIMIT**: no exact common OEM service part number was established for the core Challenger-versus-Charger latch or lower-hinge assemblies. The coupes and sedans use different core service numbers.
- **ADR LIMIT**: this supports an ADR 2/01 component-architecture similarity argument only. It does not prove latch/hinge strength, longitudinal/transverse load performance, installed configuration, or ADR compliance.

Functional latch and hinge crosswalk

Component	Challenger	Charger	Match basis	Result
Front door latch — right	68174640AH	04589916AH	same OEM component class, side and function; different service part number	FUNCTIONAL-SIMILARITY PASS
Front door latch — left	68174641AH	04589913AI	same OEM component class, side and function; different service part number	FUNCTIONAL-SIMILARITY PASS
Front lower door hinge — right	68026642AC	68148514AB	same genuine-Mopar component class, side and lower-hinge function from retailer fitment listings; different service part number	FUNCTIONAL-SIMILARITY PASS
Front lower door hinge — left	68026643AC	68148515AB	same genuine-Mopar component class, side and lower-hinge function from retailer fitment listings; different service part number	FUNCTIONAL-SIMILARITY PASS

Hinge entries use third-party genuine-Mopar parts retailer fitment listings; local snapshots and hashes are recorded separately and are not OEM engineering evidence.

Controlled conclusion

Broad-criterion result: PASS. Challenger and Charger variants demonstrate corresponding front-door latch and lower-hinge component classes. The 26 exact common exterior-handle service numbers show ancillary door-control commonality only. The core latch and lower-hinge service numbers differ, so the evidence must be described as functional/component-class similarity—not exact latch/hinge identity and not ADR 2/01 compliance.

Evidence needed for a compliance-grade conclusion

- VIN-specific build records and fitted part labels.
- OEM engineering drawings/specifications for latch, striker, hinge and attachments.
- ADR 2/01 or accepted-alternative test evidence with variant coverage.
- Clause-level assessment of longitudinal/transverse latch loads and hinge requirements.
